

Nutrisafe2

ZERO REPORTED MISCONNECTIONS IN OVER 20 YEARS OF CLINICAL USE

Accurate

- Dose accuracy is of great importance in smaller patients, especially for critical drug administration. Fluid displacement creates an overdosing risk when using the ENFit syringe.

Clean

- Engineered to be 30% smaller.
- No need for the cleaning and disinfection protocols associated with ENFit™.
- Minimises the risk of microbial contamination, safeguarding the health and well-being of patients.

Safe

- Designed for smaller patients.
- Nutrisafe2 is a unique, safe enteral feeding system, developed to meet ISO 80369-1 standards.
- Ensuring Patient Safety and Guaranteed Nutrient Delivery: The lockable system and incompatibility with non-enteral connectors (like Luer) virtually eliminate misconnections and accidental disconnections.
